Patchwork and Its Pitfalls: The Cost of Half-Way Solutions describes decision makers' patchwork actions that occur due to hesitation and lack of firmness and determination. Under the pretext of "humanitarianism," "saving lives," or taking an otherwise wimpy action, they end up taking a cowardly action at the cost of human lives and much material damage. The costliest action often turns out to be the cheapest, but is seldom done, while the easiest and apparently cheapest action ends up being the most expensive in the aggregate. This book is important, because indecisive decision makers can emerge in all nations at all times. The author's inspiration for writing this book: "When I watch politicians who repeatedly take cowardly decisions out of 'human considerations' and concern for lives and material preservations, but in fact end up wasting both."

How logistics clusters can create jobs while providing companies with competitive advantage. Why is Memphis home to hundreds of motor carrier terminals and distribution centers? Why does the tiny island-nation of Singapore handle a fifth of the world's maritime containers and half the world's annual supply of crude oil? Which jobs can replace lost manufacturing jobs in advanced economies? Some of the answers to these questions are rooted in the phenomenon of logistics clusters—geographically concentrated sets of logistics-related business activities. In this book, supply chain management expert Yossi Sheffi explains why Memphis, Singapore, Chicago, Rotterdam, Los Angeles, and scores of other locations have been successful in developing such clusters while others have not. Sheffi outlines the characteristic "positive feedback loop" of logistics clusters development and what differentiates them from other industrial clusters; how logistics clusters "add value" by generating other industrial activities; why firms should locate their distribution and value-added activities in logistics clusters; and the proper role of government support, in the form of investment, regulation, and trade policy. Sheffi also argues for the most important advantage offered by logistics clusters in today's recession-plagued economy: jobs, many of them open to low-skilled workers, that are concentrated locally and not "offshorable." These logistics clusters offer what is rare in today's economy: authentic success stories. For this reason, numerous regional and central governments as well as scores of real estate developers are investing in the development of such clusters.
