Accompanied by a CD-Rom of training materials, which allows for ease of reproduction and enhanced usability, the workbook will help the facilitator of the filial training and will provide a much needed educational outline to allow filial therapists to pass their knowledge on to parents. The Treatment Manual provides a comprehensive outline and detailed guidelines for each of the ten sessions, facilitating the training process for both the parents and the therapist. The book contains a designed structure for the therapy training described in the book, with child-centered play therapy principles and skills, such as reflective listening, recognizing and responding to children's feelings, therapeutic limit setting, building children's self-esteem, and structuring required weekly play sessions with their children using a special kit of selected toys. Bratton and her co-authors recommend teaching aids, course materials, and activities for each session, as well as worksheets for parents to complete between sessions. By using this workbook and CD-Rom to accompany the CPRT book, filial therapy leaders will have a complete package for use in training parents to act as therapeutic agents with their own children. In *Group Filial Therapy (GFT)*, therapists train parents to conduct play sessions with their own children to help meet children's therapeutic needs, and to transfer appropriate skills to family life. Based on parents' application of Child-Centred Play Therapy, taught and supervised by filial therapists, this evidence-based method is highly effective for working with families from diverse backgrounds and locations. This book provides an accessible guide to the theory and practice of GFT, and for the first time offers step-by-step guidelines for implementing the GFT program developed by Dr Guernsey, the co-creator of Filial Therapy. Important practical considerations are addressed by Dr Guernsey and Dr Ryan, such as how to determine the composition of groups and the duration of programs, and how to conduct Filial Therapy intakes. The facilitative attitudes and skills needed to be an effective Filial Therapy group leader are also described, and comprehensive instructions for implementing Dr Guernsey's 20-week model of GFT are provided. The book closes with examples of how the program may be adapted to meet the needs of special groups. Replete with examples and dialogues bringing to life the group process, this definitive guide will enable therapists already familiar with the method, as well as those wishing to learn it, to maximise the fulfilment of therapeutic goals for participating families. Practitioners in mental health, social services and counselling, as well as parenting experts, play and filial therapists and therapists in training will find that this book expands and enriches the services they can offer their clients.

A brilliant and courageous doctor reveals, in gripping accounts of true cases, the power and limits of modern medicine. Sometimes in medicine the only way to know what is truly going on in a patient is to operate, to look inside with one's own eyes. This book is exploratory surgery on medicine itself, laying bare a science not in its idealized form but as it actually is -- complicated, perplexing, and profoundly human. Atul Gawande offers an unflinching view from the scalpel's edge, where science is ambiguous, information is limited, the stakes are high, yet decisions must be made. In dramatic and revealing stories of patients and doctors, he explores how deadly mistakes occur and why good surgeons go bad. He also shows us what happens when medicine comes up against the inexplicable: an architect with incapacitating back pain for which there is no physical cause; a young woman with nausea that won't go away; a television newscaster whose blushing is so severe that she cannot do her job. Gawande offers a richly detailed portrait of the people and the science, even as he tackles the paradoxes and imperfections inherent in caring for human lives. At once tough-minded and humane, *Complications* is a new kind of medical writing, nuanced and lucid, unafraid to confront the conflicts and uncertainties that lie at the heart of modern medicine, yet always alive to the possibilities of wisdom in this extraordinary endeavor. *Complications* is a 2002 National Book Award Finalist for Nonfiction.

How do human beings become human? This question lies behind the so-called “human sciences.” But these disciplines are scattered among many different departments and hold up a cracked mirror to humankind. This is why, in the view of Paul Ricoeur, we need to develop a philosophical anthropology, one that has a much older history but still offers many untapped resources. This appeal to a specifically philosophical approach to questions regarding what it was to be human did not stop Ricoeur from entering into dialogue with other disciplines and approaches, such as psychoanalysis, history, sociology, anthropology, linguistics and the philosophy of language, in order to offer an up-to-date reflection on what he saw as the fundamental issues. For there is clearly not a simple, single answer to the question “what is it to be human?” Ricoeur therefore takes up the complexity of this question in terms of the tensions he sees between the “voluntary” and the “involuntary,” “acting” and “suffering,” “autonomy” and “vulnerability,” “capacity” and “fragility,” and “identity” and “otherness.” The texts brought together in this volume provide an overall view of the development of Ricoeur’s philosophical thinking on the question of what it is to be human, from his early 1939 lecture on “Attention” to his remarks on receiving the Kluge Prize in 2004, a few months before his death.

Although the general public in the United States assumes children to be generally healthy and thriving, a substantial and growing number of children have at least one chronic health condition. Many of these conditions are associated with disabilities and interfere regularly with children's usual activities, such as play or leisure activities, attending school, and engaging in family or community activities. In their most severe forms, such disorders are serious lifelong threats to children's social, emotional well-being and quality of life, and anticipated adult outcomes such as for employment or independent living. However, pinpointing the prevalence of disability among children in the U.S. is difficult, as conceptual frameworks and definitions of disability vary among federal programs that provide services to this population and national surveys, the two primary sources for prevalence data. Opportunities for Improving Programs and Services for Children with Disabilities provides a comprehensive analysis of health outcomes for school-aged children with disabilities. This report reviews and assesses programs, services, and supports available to these children and their families. It also describes overarching program, service, and treatment goals; examines outreach efforts and utilization rates; identifies what outcomes are measured and how they are reported; and describes what is known about the effectiveness of these programs and services.

The past two decades has witnessed unprecedented changes in the corporate governance landscape in Europe, the US and Asia. Across many countries, activist investors have pursued engagements with management of target companies. More recently, the role of the hostile activist shareholder has been taken up by a set of hedge funds. Hedge fund activism is characterized by mergers and corporate restructuring, replacement of management and board members, proxy voting, and lobbying of management. These investors target and research companies, take large positions in their stock, criticize their business plans and governance practices, and confront their managers, demanding action enhancing shareholder value. This book analyses the impact of activists on the companies that they invest, the effects on

shareholders and on activists funds themselves. Chapters examine such topic as investors' strategic approaches, the financial returns they produce, and the regulatory frameworks within which they operate. The chapters also provide historical context, both of activist investment and institutional shareholder passivity. The volume facilitates a comparison between the US and the EU, juxtaposing not only regulatory patterns but investment styles.
