This book is an up-to-date, comprehensive review of the neuropsychiatry of different types of cognitive impairment by active authorities in the field. There is an emphasis on diagnostic and management issues. Cognitive impairment both with and without criteria for dementia is covered. A critical appraisal of the methodological aspects and limitations of the current research on the neuropsychiatry of cognitive impairment and dementia is included. Unanswered questions and controversies are addressed. Non-pharmacological and pharmacological aspects of management are discussed, to provide robust information on drug dosages, side effects and interaction, in order to enable the reader to manage these patients more safely. Illustrative cases provide real life scenarios that are clinically relevant and engaging to read. Neuropsychiatric Symptoms of Cognitive Impairment and Dementia is aimed at neurologists, psychiatrists, gerontologists, and general physicians. It will also be of interest to intensive care doctors, psychologists and neuropsychologists, research and specialist nurses, clinical researchers and methodologists.

Intracranial germ cell tumors are a group of uncommon neoplasms of the central nervous system. The clinical features and natural history of these lesions are quite unique and variable. While intracranial germ cell tumors have been a fascination to

neurooncologists for decades, the relatively small number of patients seen in any single institution has hampered the important clinical investigation that is so needed. This text is complete with detailed information concerning the epidemiology, pathology, oncological biology, clinical findings, radiology, and treatment options including surgical strategy, radiotherapy, and chemotherapy for this heterogeneous group of neoplasms. The ongoing clinical trials concerning the optimization of therapy are efficiently summarized. An important final segment addresses the late sequelae of therapy which is of great significance since the majority suffering from these tumors are young patients. This first and only book on intracranial germ cell tumors includes excellent and comprehensive data sheets, illustrations, and radiograms. It provides a detailed and outstanding reference source for physicians taking care of patients with intracranial germ cell tumors, and will be a very welcome edition to their reference libraries.

Provides an evidence-based review of the connections between physical activity, mental health, and well-being, presenting research illustrating how the use of physical activity can reduce the impact of potentially debilitating mental health conditions.

The Humanitarian Emergency Settings Perceived Needs Scale (HESPER) provides a quick, scientifically robust way of assessing the perceived serious needs of people affected by large-scale humanitarian emergencies, such as war, conflict or major natural disaster. Perceived needs are needs which are felt or expressed by people themselves and are problem areas with which they would like help. The HESPER Scale assesses a wide range of social, psychological and physical problem areas. However, it does not provide an answer as to whether, or how to, offer help. It simply identifies those serious problems that are common in a population. These problems should then be assessed and addressed in more detail. The HESPER Scale was developed by the World Health Organization and King's College London in order to fill several gaps in the humanitarian field. It enables needs assessments to be based directly on the views of people affected by humanitarian emergencies, and provides a more accurate picture of the serious problems with which the overall emergency-affected population wants help. This manual includes the HESPER Scale, as well as a detailed explanation of how to use the HESPER Scale, and how to organize, analyze and report on a HESPER survey.

Here is a trailblazing book on issues of vital interest to the future of humankind. Ecotherapy: Healing Ourselves, Healing the Earth sheds light on humankind's most serious health challenge ever--how to save our precious planet as a clean, viable habitat. As a guide for therapists, health professionals, pastoral counselors, teachers, medical healers, and especially parents, Ecotherapy: Healing Ourselves, Healing the Earth highlights readers' strategic opportunities to help our endangered human species cope constructively with the unprecedented challenge of saving a healthful planet for future generations. Ecotherapy: Healing Ourselves, Healing the Earth introduces readers to an innovative approach to ecologically-grounded personality theory, spirituality, ecotherapy, and education. The book shares the author's well-developed theories and methods of ecological diagnosis, treatment, and education so professionals and parents, our most influential teachers, can rise to the challenge of saving our planet. Readers will find that the book helps them accomplish this goal as it: explores an expanded, ecologically grounded theory of personality development, the missing dimension in understanding human identity formation outlines a model for doing ecologically oriented psychotherapy, counseling, medical healing, teaching, and parenting describes life-saving perspectives for making one's lifestyle more earth-caring demonstrates the importance of hope, humor, and love suggests how these earthy approaches may be utilized in a variety of social contexts and cultures A systematic theory and practice guidebook, Ecotherapy: Healing Ourselves, Healing the Earth fills a wide gap in both the counseling and therapy literature and the ecology literature. It offers an innovative model for fulfilling the "ecological circle" between humans and nature with three action dimensions. These are self-care by being intentionally nurtured by nature; spiritual enrichment by enjoying the transcendent Spirit in nature; and

responding by nurturing nature more responsibly and lovingly. The theories and practical applications presented in the book come together to explore long-overlooked issues at the boundary between human health and the health of the natural environment. Psychotherapists, health professionals, and teachers; pastoral counselors and other clergy who counsel and teach; laypersons who are parents and grandparents; and individuals and groups interested in environmental issues will find *Ecotherapy: Healing Ourselves, Healing the Earth* essential for approaching the long-neglected earthy roots of the total human mind-body-spirit organism.

Avoiding overweight and obesity is the best-established diet-related risk factor for cancer. The proportion of people who are overweight/obese is increasing, and the amount of physical activity is decreasing in most populations, including urban populations in many developing countries. The increasing prevalence of overweight/obesity is presumably due to the increasing availability of highly palatable, high energy foods and an increasing sedentary lifestyle due to mechanisation of both workplace and leisure activities. Overweight/obesity and reduced physical activity increases the risk of cancers in various organs. Maintaining a healthy body weight and regular physical activity is the second most important way to prevent cancer, after tobacco control. The suggestions of possible public health action aimed at tackling these risk factors include education activities to promote balanced diets which are not excessive in energy and broad education and planning to enable and encourage physical activity during work and leisure. The Handbook Volume 6 on Weight Control and Physical Activity contains a full discussion of this topic, together with recommendations for public health action.

Designed to be totally relevant to UK practice, this text introduces the multifaceted problem of pain control with which nurses are daily confronted. Taking the whole person approach, it covers methods of pain relief provision, from the use of simple relaxation techniques, to the use of drugs.

The "gentle weapon" of prayer opens the heart and soul and gives voice to our deepest yearnings, while bringing us closer to God.

The startling wisdom of Rebbe Nachman of Breslov will help you talk with God and enable you to hear your own voice as well. This book is a practical resource that will support the delivery of holistic mental health interventions in the primary and community care setting for older people. Primary care delivery is discussed in relation to both functional mental health problems, such as anxiety, depression, and psychotic and personality disorders, and acquired organic mental disorders of old age, such as dementia, cognitive impairments, and delirium. Careful consideration is paid to the complex relationship between mental and somatic health problems, as well as the impacts of multimorbidity and polypharmacy. Further topics include, for example, epidemiology, wider determinants of health, different care models, history taking, neurocognitive and capacity assessment, and pharmacological, psychological, and physical interventions. The wider goals of the book are to support the development of community resilience and self-care in older people; to promote universal access and equity for older people in order to enable them to achieve or recover the highest attainable standard of health, regardless of age, gender, or social position; and to promote pathways to care for older people with mental health problems respecting their autonomy, independence, human rights, and the importance of the life-course approach. This book will be an invaluable resource for all professionals who work with older adults with mental health problems and those training in these fields including physicians, psychiatrists, family doctors, geriatricians, general practitioners, nurses, psychologists, neurologists, occupational therapists, social workers, support workers and community health and social care workers.

Captures advancements in the vascular cognitive impairment approach to dementia, providing clear guidelines in diagnoses and management.

Insomnia is one of the most frequently reported health problems, yet until the publication of this book, the literature lacked a structured and practical approach for clinical management. This volume addresses the need by offering a complete, multifaceted cognitive-behavioral treatment program for chronic insomnia. Using a conceptual model that emphasizes the interplay between maladaptive behavior patterns and dysfunctional sleep cognitions, the book covers all aspects of assessment and treatment. In addition, it is the first to present a systematic approach to withdrawing drug-dependent insomniacs from hypnotic medications. The book also features particularly useful support materials, including detailed outlines of the structured clinical interview for insomnia, sequential therapy sessions, sleep diaries, questionnaires, and other handouts. This book will be of interest to a wide array of professionals, from psychologists, psychiatrists, social workers, and nurses, to family practitioners and internists. Written in an accessible style, it is also useful for students in these fields.

The second edition of *Mental Health in Australia: Collaborative Community Practice* provides a comprehensive overview of the issues, practice and policy affecting mental health in Australia. New material on non-government organisations, rehabilitation and old age, early psychosis, children and mental health issues, early intervention and emergency psychiatry, ensures the book's currency in a field of changing paradigms. Divided into two parts, the book first covers the context and history of mental health in Australia, with chapters on community responses, conceptual modes, global perspectives, research, and evaluation of mental health care delivery. Part Two focuses on clinical practice and case management, and includes discussion of possible future directions. Margaret Grigg, a new co-editor, has added a nursing perspective to the book, with new material and case studies showing the importance of collaborative practice in mental health services across nursing, medicine, occupational therapy, physiotherapy and social work. Twenty-four case studies illustrate the 'lived experience' of mental health, and demonstrate responses from diverse professional services — from diagnosis and referral to treatment and outcomes.

This book gathers 14 original contributions published in an IJERPH Special Issue that deal with the perception of environmental sounds and how such sounds are likely to affect human quality of life and well-being and the experience of a place. The research focus over the years has been gradually shifting from treating sound simply as “noise” and something that cities should get rid of to a potential “resource” to promote and support community life in public spaces. Three main topics or “needs” to be addressed by researchers and practitioners emerged from this Special Issue: (1) the need to re-think “quietness” in cities as something that goes beyond the mere “pursuit of silence”, (2) the need to integrate additional contextual factors in the characterization and management of urban acoustic environments for public health, and (3) the need to consider the acoustic quality of indoor spaces as opposed to an outdoor-only perspective. The contributions collected in this book will hopefully trigger new questions and inform the agenda of future researchers and practitioners in the environmental acoustics domain.

Germ cell tumors are relatively rare compared with other malignancies, and compilations of knowledge that encompass the entire spectrum of the disease are lacking. This textbook, written by the foremost authorities in the field, rectifies the situation by discussing in depth a broad range of topics, including biology, epidemiology, pathology, treatment, and late effects. Bearing in mind that germ cell tumors are most prevalent in the adolescent and young adult age group, causes of disease and treatment approaches in pediatric and adult patients are compared and contrasted. By spanning the entire life course, from prenatal origins of disease through to treatment in adults and late effects of treatment, the editors have produced a book that will be of interest to both pediatric and adult oncologists.

In *Mordin On Time*, Nick Mordin sets out his method for answering the most fundamental question facing punters in any race, namely: which is the fastest horse? He was timing the sections of races with a stop watch, estimating wind strength and direction, adjusting for movements of running rails, using projected times and calculating average times years before the best-selling American books on speed rating were published. This new edition incorporates much new material, including standard times for all Irish racecourses (plus the major French ones). *Mordin On Time* enables the reader to construct their own speed ratings wherever they live.

The concept of Flow was first explained by Csikszentmihalyi (1975), described as an “optimal experience,” he noted that artists were entirely caught up in their projects, working feverishly to finish them and then lose all interest in their work after completion. The incentive lies in the act of creativity itself. The person feels optimally challenged while totally immersed in the activity. At the heart of flow research is the motivational aspect of this experience. Flow motivates people to carry out certain activities repeatedly, seeking a challenge in the act and looking to improve their skills and abilities. In this book, this motivational aspect will be imbedded in and related to other theories of (intrinsic) motivation and empirical work on flow and performance. The book provides a review of the current flow research, with a focus on rigorous analysis on methodology. The author takes the time to present methodological aspects in flow research to qualify empirical work. In addition, this volume presents neuropsychological considerations and empirical correlates of flow experiences. The work also describes various theoretical integrations of the different paths being taken within the field of flow research. It presents what has been learned since the beginning of flow research, what is still open, and how the mission to understand and foster flow experience research should continue.

Schizophrenia, which starts in middle age or late life, has been described as 'the darkest area of psychiatry.' It is certainly controversial, with much disagreement about cut-off ages, diagnostic criteria and nomenclature. The contributors to this unique and very important book represent views from Europe and North America as well as Australia, Japan, and Nepal; they come from backgrounds of clinical practice and research. The contributors and editors were motivated by common aims: to review current international knowledge about late onset schizophrenia, to debate issues of heterogeneity, gender, brain maturation and aging, putative structural and functional cerebral substrates for psychosis, to reach consensus on diagnosis and terminology, and to future research directions. The resulting book is an unqualified success which as well as being invaluable in old age psychiatry, sheds light on all aspects of schizophrenia treatment and research.

The world of IT is always evolving, but in every area there are stable, core concepts that anyone just setting out needed to know last year, needs to know this year, and will still need to know next year. The purpose of the Foundations series is to identify these concepts and present them in a way that gives you the strongest possible starting point, no matter what your endeavor. TCP/IP Foundations provides essential knowledge about the two protocols that form the basis for the Internet, as well as many other networks. What you learn here will benefit you in the short term, as you acquire and practice your

skills, and in the longterm, as you use them. Topics covered include: The origins of TCP/IP and the Internet The layers comprising the OSI and DoD models TCP/IP addressing Subnet masks Creating custom subnet masks Supernetting and Classless Inter-Domain Routing (CIDR) Name resolution The Domain Name System (DNS) and Dynamic DNS Windows Internet Naming Services (WINS) The Dynamic Host Configuration Protocol (DHCP) What to expect with IPv6

In recent years there has been a growing body of evidence from fields such as public health, architecture, ecology, landscape, forestry, psychology, sport science, psychiatry, geography suggesting that nature enhances psychological health and wellbeing. Physical activity in the presence of nature, feelings of connection to nature, engagement with nature, specific environmental features (e.g. therapeutic, water and trees) and images of real and virtual nature have all been posited as important wellbeing facilitators. Thus, the association between natural environments and health outcomes might be more complex than initially understood (Pritchard, Richardson, Sheffield, & Mcewan, 2019). Despite the number of studies showing improvements in psychological health and wellbeing through nature-based physical activities or feelings of connection to nature the exact role and influence of the natural environment in this process is still rather unclear (Brymer, Davids, & Mallabon, 2014; Karmanov & Hamel, 2008). Research is also beginning to consider the importance of individual differences, meaning and the person-environment relationship (Freeman, Akhurst, Bannigan & James, 2016; Freeman & Akhurst, 2015) in the development of wellbeing and health outcomes. Furthermore traditional theoretical notions, such as Biophilia, topophilia, restoration theories and stress reduction theories typically used to interpret findings are also being critiqued. Often one of the main barriers for practitioners is the vast array of theories that claim to effectively explain research findings but that tend to be only partially relevant (e.g. for Physical activity or restoration), focus on the characteristics of the person (e.g. nature relatedness) and only some features of the landscape (e.g. therapeutic landscapes). This special edition therefore brings together cutting edge ideas and research from a wide set of disciplines with the purpose of exploring interdisciplinary or trans-disciplinary approaches to understanding the psychological health and wellbeing benefits of human-nature interactions.

In the past, research involving the relationship between physical activity and health has appeared in many diverse journals, with no one publication being devoted to that relationship. The Journal of Physical Activity and Health (JPAH) answers the need for a single publication with a focus solely on physical activity and health. JPAH publishes original research and review papers examining how physical activity influences all aspects of health, studying physical activity as an exposure as well as an outcome. It also invites papers that examine the behavioral, community, and environmental interventions that may affect physical activity on an individual and population basis. Recent issues of JPAH have addressed topics such as measurement of physical activity, surveillance of physical activity, meeting guidelines for

physical activity in working populations, and physical activity intervention in older adults with chronic diseases. Research has been published from many international authors. Articles on physical activity patterns and the environment are planned for later this year. Also available is the online format of JPAH that offers the same authoritative content contained in the print edition, but with the additional advantages of electronically formatted material including the potential to search journals in seconds, access to five years of back issues, and the ability to examine the online version weeks before the print version arrives. Online subscribers are also sent each issue's table of contents by e-mail to announce that a new issue has been published.
