The U.S. Navy is ready to execute the Nation's tasks at sea, from prompt and sustained combat operations to every-day forward-presence, diplomacy and relief efforts. We operate worldwide, in space, cyberspace, and throughout the maritime domain. The United States is and will remain a maritime nation, and our security and prosperity are inextricably linked to our ability to operate naval forces on, under and above the seas and oceans of the world. To that end, the Navy executes programs that enable our Sailors, Marines, civilians, and forces to meet existing and emerging challenges at sea with confidence. Six priorities guide today's planning, programming, and budgeting decisions: (1) maintain a credible, modern, and survivable sea based strategic deterrent; (2) sustain forward presence, distributed globally in places that matter; (3) develop the capability and capacity to win decisively; (4) focus on critical afloat and ashore readiness to ensure the Navy is adequately funded and ready; (5) enhance the Navy's asymmetric capabilities in the physical domains as well as in cyberspace and the electromagnetic spectrum; and (6) sustain a relevant industrial base, particularly in shipbuilding.

MORE FOR YOU is about over half a thousand unique flavors, our search for the Garden of Eden, and a two thousand year old road map believed to have been given by an angel, which eventually turned out to be only a man made manifest targeting human desires. "And I looked round about that land and saw a river with milk and honey. And there were at the brink of the river trees planted, full of fruits: now every tree bare twelve fruits in the year, and they had various and divers fruits: and that land was seven times brighter than silver."

ought's A-7 Corsair II served the U.S. Navy for over over two decades, and flew with distinction during the Vietnam conflict. The subsonic A-7 was based on Chance Vought's supersonic F-8 Crusader. It boasted a heads-up display, an inertial navigation system, and other innovations. The plane entered service in 1966, and served in Vietnam in late 1967. Its performance was impressive. The USS Ranger's VA-147 flew over 1,400 sorties with the loss of only one aircraft. The Air Force purchased an advanced version, the A-7D, equipped with a more powerful engine. The plane later flew missions over Lebanon, Libya, Grenada, Panama, and Iraq. The last planes in U.S inventory were retired in 1991.

"Since its earliest days, flight has been about pushing the limits of technology and, in many cases, pushing the limits of human endurance. The human body can be the limiting factor in the design of aircraft and spacecraft. Humans cannot survive unaided at high altitudes. There have been a number of books written on the subject of spacesuits, but the literature on the high-altitude pressure suits is lacking. This volume provides a high-level summary of the technological development and operational use of partial- and full-pressure suits, from the earliest models to the current high altitude, full-pressure suits used for modern aviation, as well as those that were used for launch and entry on the Space Shuttle. The goal of this work is to provide a resource on the technology for suits designed to keep humans alive at the edge of space."--NTRS Web site.

The Corsair was one of WWII's most superb fighters, achieving a victory ratio of nearly 11:1 in the Pacific. Had things worked out differently, its sister craft, Goodyear's F2G Super Corsair, might have eclipsed that record. Based on Goodyear's fixed-wing F1G design, the F2G had a bubble cockpit and was fitted with a Pratt & Whitney R-4360 engine. The twenty-eight cylinder, four row radial air-cooled monster provided nearly 50% more take-off power than the standard double Wasp. Yet by the close of WWII, only five F2G's had been built, and so the plane never saw combat. Originally printed by Goodyear and the U.S. Navy, this Flight Handbook taught pilots everything they needed to know before entering the cockpit.
