Personalized Learning: A Guide for Engaging Students with Technology is designed to help educators make sense of the shifting landscape in modern education. While changes may pose significant challenges, they also offer countless opportunities to engage students in meaningful ways to improve their learning outcomes. Personalized learning is the key to engaging students, as teachers are leading the way toward making learning as relevant, rigorous, and meaningful inside school as outside and what kids do outside school: connecting and sharing online, and engaging in virtual communities of their own. Renowned author of the Heck: Where the Bad Kids Go series, Dale Basye, and award winning educator Peggy Grant, provide a go-to tool available to every teacher today—technology as a way to ‘personalize’

The twenty-first century has seen a breathtaking expansion of statistical methodology, both in scope and in influence. 'Big data', 'data science', and 'machine learning' have become familiar terms in the news, as statistical methods are brought to bear upon the enormous data sets of modern science and commerce. How did we get here? And where are we going? This book takes us on an exhilarating journey through the revolution in data analysis following the introduction of electronic computation in the 1950s. Beginning with classical inferential theories - Bayesian, frequentist, Fisherian - individual chapters take up a series of influential topics: survival analysis, logistic regression, empirical Bayes, the jackknife and bootstrap, random forests, neural networks, Markov chain Monte Carlo, inference after model selection, and dozens more. The distinctly modern approach integrates methodology and algorithms with statistical inference. The book ends with speculation on the future direction of statistics and data science.

The book presents an entire MIPS instruction set—instruction by instruction—the fundamentals of assembly language, computer arithmetic, pipelining, memory hierarchies and I/O. A new aspect of the third edition is the explicit connection between program performance and CPU performance. The authors show how hardware and software components--such as the specific algorithm, programming language, compiler, ISA and processor implementation--impact program performance. Throughout the book a new feature focusing on program performance describes how to search for bottlenecks and improve performance in various parts of the system. The book digs deeper into the hardware/software interface, presenting a complete view of the function of the programming language and compiler--crucial for understanding computer organization. The book explores advances in soft-skill training through the adaptation of traditional psycho-pedagogical methodology to digital and online settings. Several educational techniques are explored, such as role-playing, psychodrama and rule and drama-based games. The experiences reported in the book are the synthesis of several European projects, coordinated by the authors, aimed at applying known psycho-pedagogical training models to on-line, technology enhanced learning contexts in a broad range of applications and target groups. The specificity of such a psycho-pedagogical methodology, applied throughout all the discussed EU projects, is mainly represented by the importance of feedback and debriefing processes that can be conveyed to learners through different means, such as online group or individual chat with tutors, automatic reports and a psychologically informed scoring system. Tutors, either real or artificial, are seen as the key factor facilitating the training process. The ultimate objective of this book is to offer a theoretical framework where real examples, direct experiences and possible indications on how rule and drama-based multiplayer and single player games can support traditional practice for enhancing soft skills to a wide community of trainers, coaches, HR advisors, consultants and psychologists.
